Projects

CivicChain — Hackathon Project: Transparent Civic Complaint & Accountability Platform 09/2025 – 10/2026

React, Typescript, PostgreSQL, Auth, Geolocation, Blockchain

- Built a location-aware civic complaint platform for reporting and tracking municipal issues.
- Implemented automatic duplicate detection using category and latitude/longitude matching.
- Designed citizen-confirmed resolution flow to prevent premature complaint closure.
- Developed role-based dashboards for municipal and state authorities with analytics and voting.
- Integrated blockchain audit layer for immutable logging of verified complaint resolutions.
- Used Supabase as a unified backend for authentication, data storage, and scalability.

MokeMoney — MERN Stack, JWT, MongoDB, Mongoose 06/2024 – 08/2024

- Implemented JWT-based authentication with protected routes and secure session handling.
- Reduced redundant API calls by 70% using client-side caching.
- Ensured ACID-safe wallet transfers using Mongoose atomic transactions.
- Optimized database load by 60% with server-side pagination.

Online-Course-Selling-API — Node.js, Express.js, MongoDB 07/2025

- Built REST APIs with JWT authentication and role-based access control (Admin/User).
- Developed admin workflows for course creation, updates, and management.
- Implemented secure user flows for signup, purchase, and protected content access.
